Wisdom
isn't all
that comes
with age.

The closer you get to age 50, the more susceptible you become to cataracts, glaucoma, macular degeneration and various other eye diseases—any of which is a serious threat to your vision. If you're diagnosed with an eye disease, you want the best care possible, as soon as possible. And that means the Wilmer Eye Institute at Johns Hopkins. For five years, *U.S. News & World Report* has rated the Wilmer

Eye Institute number one in the country.

The key to better treatment is a precise diagnosis. And the doctors of the Wilmer Eye Institute are among the most experienced in the world at diagnosing eye disease. Wilmer also offers the latest treatments. In fact, many of the latest diagnostic tests and treatments for eye disease were developed or perfected here.

If you'd like to come to Wilmer, talk to your doctor, or call us. To schedule an appointment, to reserve your place at a free seminar, or to receive the soon-to-be-published *A Guide to Eye Care Services at Johns Hopkins*, call today. 95-JOHNS (955-6167). And when you choose health insurance, make sure it gives you full access to Johns Hopkins.

JOHNS HOPKINS
H E A L T H C A R E

Just the name makes you feel better.

Johns Hopkins Wilmer Eye Institute ophthalmologists practice at The Johns Hopkins Hospital, Johns Hopkins Bayview Medical Center, Green Spring Station, Childrens Medical, Severna Park, Wyman Park and other locations.

Join us for one of our free seminars.

All sessions are from 7:00 pm - 8:30 pm.
